

Item:Paulownia sapling hybrid 9501 with certicate

Company information:

We are China professional paulownia planter with long experience both planting and exporting about paulownia more than 10 years.

We will send Technical Guidance and Phytosanitary certificate.

China Paulownia sapling hybrid 9501 with certificate

For getting better paulownia pls pay attention to the follows:

Land	<ol style="list-style-type: none">1. Ground water level: more than 1.5m.2. Soil texture: permeability or breathability good loam and sand soil, avoid clay, harden, ventilation adverse soil.3. PH of soil, 6-7.5 is the best, 5-8.9 is acceptable.4. Good irrigation and drainage system will be better.5. Elevation up to 2000m is acceptable
Water	<ol style="list-style-type: none">1. Fecund and wet. No ponding and water saturation2. Annual rainfall 400mm-1200mm.3. In seedling period, keep the soil with good moisture(20-40%), after grow up than 50cm drought resistant ability improve, then better and better.4. Attention please: water enough, no ponding, keep soil breathing
Sunshine	<ol style="list-style-type: none">1. Plant paulownia tree in sunny place and keep away from heavy wind.2. Try to prohibit paulownia tree under other bigger trees3. Density. For seedling using 0.8x1m or 1x1m distance, for forestation 4x4m or bigger distance. Plant with crop distance more than 3x15m.
Temperature	Annual temperature 12-20celsius degree grow better; -20-+45celsius degree is ok, vulnerable to frost damage if absolute temperature less than -25celsius degree.
Fertilizer	At the first, for paulownia seed, paulownia root and paulownia stump, and other paulownia planting, give little fertilizer, and in the future: less quantity fertilizer and much more times.
Breeding Method	<ol style="list-style-type: none">1. For seedling, mainly by Paulownia seed and paulownia root, and the root is the better and common way.2. Afforestation: paulownia root, paulownia stump and seedling of one or two years.
Difference of seed and root	Paulownia seed price lower, but seed very small and light, high technical requirement, and it is hard to get better seedling in one year. Keep gene of original plant not so well, It's easy to have a separation phenomenon. Plant by paulownia root(vegetative propagation), keep the nature of original species, simple technical, save work and time, get better paulownia tree.
Work Progress	Paulownia seeds: choose quality species tree, disinfection and drying, package and storage. Paulownia root: take root out from soil of one year seedling-then cut them-clean soil- then disinfect with several drugs- washing-fumigation-trim-package-fresh keeping storehouse-arrange shipping.

Features Instruction

Features of hybrid

1. Hybrid by paulownia fortunei x tomentosa, parents are south and north species of Chinese.
2. The hybrid species inherited good gene of the both, has good environmental adaptability.
3. Fast growth, with medium crown, straight through trunk, small difference between top and end.
4. The first 1-3years fast growth of height, the first year 3-5m, the following more than 2-3m per year. From 3-4years height slowly and coarse grow faster, 4-9years is the fast period of thickness. 10years grow slowly and steadily. So the paulownia tree 7-10years mature, up to 0.8-1cbm per tree.

Please enjoy the following pictures:

one year tree

half year tree

two year tree

4-5 year tree

7year tree

big tree

FAQ:

1. The better way to plant paulownia tree?

Paulownia root cutting and paulownia stump, especially for new planter.

2. Delivery time?

From end of Nov. to next April.

offer storage service of paulownia root cutting and stumps

3. Is plant paulownia root cutting in land workable?

Yes, of course. Put whole root in land, firm lightly, cover upside by at least 3-5cm soil.

4. Withstand temperature

-25-+45 celsius degree growth is ok

5. Do paulownia planting need special soil?

No, Normal soil is ok.

6. water requirement?

Paulownia have good dry resistant, expecially height than 50cm. no need water them all the time.

7. How to get better trunk.

Choose better species, for example hybrid, and control lateral buds and trim branches.

8 how many years can be use for timber?

7-8years matured, you can start cut wood from 5years.
