

Fresh paulownia shan tong whole stumps for fast growing tree

| | |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Paulownia species | Paulownia elongate, paulownia tomentosa, paulownia fortune, paulownia hybrid 9501, paulownia shan tong |
| Breed methods | PAULOWNIA SEEDS, ROOTS CUTTING AND STUMPS |
| Land | <ol style="list-style-type: none"> 1. Ground water level: more than 1.5m. 2. Soil texture: permeability or breathability good loam and sand soil, avoid clay, harden, ventilation adverse soil. 3. PH of soil, 6-7.5 is the best, 5-8.9 is acceptable. 4. Good irrigation and drainage system will be better. 5. Elevation up to 2000m is acceptable |
| Water | <ol style="list-style-type: none"> 1. Fecund and wet. No ponding and water saturation 2. Annual rainfull 400mm-1200mm. 3. In seedling period, keep the soil with good moisture(20-40%), after grow up than 50cm drought resistant ability improve,then better and better. 4. attention please: water enough, no ponding, keep soil breathing |
| Sunshine | <ol style="list-style-type: none"> 1. Plant paulownia tree in sunny place and keep away from heavy wind. 2. Try to prohibit paulownia tree under other bigger trees 3. Density. For seedling using 0.8x1m or 1x1m distance, for forestation 4x4m or bigger distance. Plant with crop distance more than 3x15m. |
| Temperature | Annual temperature 12-20celsius degree grow better; -20-+45celsius degree is ok, vulnerable to frost damage if absolute temperature less than -25celsius degree. |
| Fertilizer | At the first, for paulownia seed, paulownia root and paulownia stump, and other paulownia planting, give little fertilizer, and in the future: less quantity fertilizer and much more times. |
| Difference of seed and root | <p>Paulownia seed price is lower, but seed very small and light, high technical requirement, and it is hard to get better seedling in one year. Keep genn of original plant not so well,It's easy to have a separation phenomenon.</p> <p>Plant by paulowna root(vegetative propagation), keep the nature of original species, simple technical, save work and time, get better paulownia tree</p> |

Paulownia stumps is the best way to getting the seedlings. Because it have the whole roots system, it can get more water and nutrient,and high survive rate.
